

Manufacturing Excellence

Grade 3518

Protecting finished floor surfaces is a priority for all building contractors during a renovation or new construction project. Blue Shield 3518 provides an inexpensive solution to protecting wood, tile, granite, carpet, and other flooring surfaces from damage.

Barrier Protection

Spills of paint, solvents, water, and other liquids will be resisted by the layer of laminate protecting the floor surface below.

Reinforced for Strength

3-way fiberglass reinforcing provides the tear resistance that will prevent foot traffic from destroying the protective barrier.

Semi-Permeable Composite

Unlike poly films, 3518 does not trap moisture condensation between itself and the floor. Condensation can cause stains, mold, mildew and other problems associated with trapped moisture.

Superior Tear Resistance

Product Description: Blue Shield 3518 is a fiberglass reinforced, non-asphaltic laminated paper.

Composition: Grade 3518 is combination of two sheets of kraft paper laminated together with reinforcing fiberglass for added strength and durability.

Standard Widths: 24", 36", 48", 60", 72" and 96"

Standard Roll Lengths: 300'

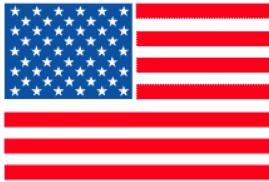

(Custom Widths and Lengths Available)

Product Weight: 25 lbs per MSF

Blue Shield 3518 Product Features:

- Oil, grease and water-resistant barrier
- Reinforced for tear and puncture resistance.
- Outstanding MVTR (Moisture Vapor Transfer Rate)
- Non-bleed, non-staining
- Superior forming characteristics, easily folded without cracking or barrier loss.
